SCINET - THE WORLD'S FASTEST TEMPORARY NETWORK!

Networked Systems Tech Talk Series @ Illinois Tech

Angie Asmus, SC24 SCinet Chair, angie.asmus@colostate.edu
Jason Zurawski, SC24 SCinet Executive Advisor, zurawski@es.net
AGENDA

● What is it?
● Fast Statistics
● Why SCinet?
● WINS
● Digging Deeper: SCient Technology and SC23 Summary
● SCinet: Year at a Glance
● SC24 Preparation
● Conclusions
THE INTERNATIONAL CONFERENCE FOR HIGH PERFORMANCE COMPUTING, NETWORKING, STORAGE, AND ANALYSIS - SC23/SC24

- Long history, dating back to 1988
- Held annually in November
- Sponsored by the Association for Computing Machinery (ACM) and the Institute of Electrical and Electronics Engineers (IEEE)
- Forum for researchers, engineers, and scientists to present their latest work, exchange ideas, and learn about the latest advances in high-performance computing and related fields.
  - Wide range of technical papers, tutorials, workshops, and panel discussions, as well as an exhibition hall where vendors showcase their latest products and services.
  - The exhibition hall also features cutting edge experiments and demonstrations powered by SCinet, the world's fastest temporary network.
SC24 SCINET CHAIR: ANGIE ASMUS

Scinet Overview
THANK YOU FOR A GREAT SCINET AT SC23 HANS ADDLEMAN!
AGENDA

- What is it?
- **Fast Statistics**
- Why SCinet?
- WINS
- Digging Deeper: SCient Technology and SC23 Summary
- SCinet: Year at a Glance
- SC24 Preparation
- Conclusions
SC23 BY THE NUMBERS

- ~14,000 Attendees
  - SC22 - 11,830 Attendees
  - SC21 - 6,694 (onsite in St Louis, hybrid)
  - SC20 - 7,446 virtual
  - SC19 - 13,918 (Denver)
  - SC18 - 13,029 (Dallas)
- 350+ exhibitors
- 200+ Technical Sessions, Workshops, and Birds of a Feather sessions
- 750+ total Volunteers SC23 wide
SC23 SCINET BY THE NUMBERS

• 6.71 Tbps delivered to the CCC
  • 16 – 400 Gbps connections
• 28.7kW power draw
• 206 Scinet Volunteers
• $40.5m in donated & loaned hardware, software, and optics from 30 contributors
• 12+ miles of Fiber deployed
• 421 wireless access points deployed
WHAT DID WE DO LAST YEAR?

- IPv6 and Option 108
- XNet 5G Wireless
- 400G ZR+
- NSO Orchestration and Automation with EVPN/VXLAN
- Replaced Rack 1 panels with MTP Cassettes facing the show floor
- Stood up new management net rack-sw
- Migrated most management and commodity nets behind conf-fw for the first time
- Brand new racks from Schneider Electric/APC and new PDU
- Switch to INext
- Tapped a significant portion of NRE traffic for the first time, setting a record.
- We are probably the only people to ever tap a 400G ZR+
- 2x400GE (800GE) optics between vendors

- Multi-vendor zero touch provisioning
- BHR using FlowSpec
- RPKI (Alerting, not blocking)
- FABRIC in SCinet
- SCinet Research Exposition
- Automated BHR with FlowSpec via Gravwell and Corero
- 400G Miami to Denver service provided and managed by a contributor (Lumen)
- Tight integration between patch team and interconnects to leverage
  - the excellent data presentation from iNext leading to a relatively smooth patching experience.
- IPv6 supporting legacy services via dns64 and nat64
- InfluxDB and Grafana

3/29/2024
AGENDA

- What is it?
- Fast Statistics
- *Why SCinet?*
- WINS
- Digging Deeper: SCient Technology and SC23 Summary
- SCinet: Year at a Glance
- SC24 Preparation
- Conclusions
WHAT IS DIFFERENT ABOUT SC?

● It has an exhibition where suppliers, researchers, and funding agencies all come together
● It has contributors that compete to provide products and services, but work together to create a solution for SCinet
  ○ opportunities for interoperability exploration
● It has a great set of people working together to create this solution
WHAT IS SCINET?

2 distinct networks built by volunteers

- Production network providing all wired and wireless internet access for attendees and exhibitors
  - Also provides bandwidth for live streaming of many sessions and workshops
- Research network in support of the Networked Research Exhibition (NRE) and SCinet’s Experimental network projects (XNET).
WHAT IS SCINET?

- 1 year to design, 1 month to build, 1 week to operate, 1 day to teardown

SC23 Statistics

- 32 Network Research Experiments (NRE) on the show floor
- 206 volunteers
  - 9 countries and 31 states represented
  - 113 different organizations from around the world
  - Since 2015, 50 WINS participants from 46 organizations and 43 states
- 30 contributors loaning $40.5M in hardware, software, and services
- 9000#’s of Loaned Hardware
- 6.71Tbps of wide area network capacity
  - Includes 16 x 400Gbps connections and 1 x 800Gbps
- 420+ Wireless Access points deployed
- WiFi 6E, with IPv6 deployed to WiFi clients
- 5G Experimentation
- 12.65+ miles of fiber optic cable installed
- 2178 fiber patches
- 409 Helpdesk Tickets
- 33kw of power required for sustained operation (average home consumes this over a day)
SCINET CHALLENGES

- All volunteer team
- Almost all of our hardware is donated
  - Supply chains!
  - Drained demo pools
  - Sometimes get beta hardware
- Extremely tight timeline.
- Network Security!
  - SCinet/SC a very big target
- Customer service and performance troubleshooting until end of show
SCINET CONTRIBUTORS

SC23 Contributing Hardware, Software, and Service Vendors

- Cisco
- Pier Group / Aruba / HPE
- Arista
- Ciena
- ESnet
- Internet2
- Juniper
- Nokia
- Schneider / APC / Critical Components
- EXFO

- Cornelis
- Gravwell
- Lumen
- Palo Alto
- Verizon
- TACC
- Corelight
- FRGP
- InMon
- Zayo
- Huber+Suhner Polatis
- Sentinel One

- Keysight
- NetAlly
- Tenable
- Viavi
- Coreo
- FABRIC
- University of Warsaw
- Florida International University

3/29/2024
AGENDA

- What is it?
- Fast Statistics
- Why SCinet?
- WINS
- Digging Deeper: SCient Technology and SC23 Summary
- SCinet: Year at a Glance
- SC24 Preparation
- Conclusions
WHAT DO 200+ PEOPLE DO?

- SCinet is made up of 18 different teams with diverse skills sets
  - Architecture / Interconnection
  - Communications
  - Contributor Relations and Logistics
  - DevOps
  - Wireless and Edge
  - Networked Research Exhibition (NRE)
  - Experimental Networks (XNET)
  - Fiber
  - Help Desk
  - Network Security
  - Power
  - Routing

- Volunteer Services (Students)
- WAN Transport
- Finance
- Physical Security
- Digital Experience
The Women in IT Networking at SC (WINS) is a multi-year program initially funded by the National Science Foundation (NSF). It was developed for addressing the prevalent gender gap that exists in Information Technology (IT), particularly in the fields of networking engineering and high-performance computing (HPC). Collaborative project managed by:

- Indiana University
- University Corporation for Atmospheric Research (UCAR)
- Energy Sciences Network (ESnet)

It was originally introduced as a pilot program in November 2015 at the SC15, and has supported volunteers for SC16 - SC24.
WINS PROGRAM GOALS

• Expand the skill sets, professional network and communications skills, including public speaking, for the participants.
• Provide technical training that is applicable and valuable to the participants’ home institution.
• Increase the diversity in the SCinet volunteer pool.
  • Since SC20 preference has been given to applicants who are historically underrepresented in the Information Technology field.
• Raise awareness of the issue of fewer women in IT.
• Gather program information, including candidate metrics and SCinet surveys (mentors and participants), to better understand gender diversity in the network engineering community and use the information to develop a sustainable program.
**WINS ACTIVITIES**

- Enables 3-8 women per year to participate in SCinet, a unique, hands-on experience in building an operational and research network from the ground up for the annual Supercomputing Conference.
- Selected by a committee of experts and rigorously reviewed and evaluated.
- SCinet provides an ideal professional development opportunity for engineers and technologists looking for direct access to the most cutting-edge network hardware and software.
- SC is a great partner and very supportive of inclusivity and increasing diversity.
- Gives the opportunity to work side by side with the world’s leading network and software engineers, and the top network technology vendors.
- Professional development activities fund WINS participants to attend and present at conferences to raise awareness of SCinet, diversity issues in IT, and technical content; alumni calls; The Quilt MOR Leadership program.
WINS AT SC24

WINS Returnees in SCinet Leadership

- SCinet Chair - Angie Asmus
- Technical Director - Brenna Meade
- Research Director - Debbie Fligor
- Edge Network Team Chair - Jennifer Kim
- Fiber Team Chair - Julie Locke
- Interconnect Team Deputy Chair - Suzanne Prentice
- Network Security Team Deputy Chair - Britt Huff
- Routing Team Chair - Kalina Dunn
- WINS Team Chair - Karen Lopez

New SC24 WINS Awardees: 6

SC23 WAN FACTS!

- 6.71 Tb/s
  - 16 - 400G connections, 1 – 800Gbps (+ some 100s, and 10s still!)
- Contributors
  - Ciena
  - Cisco
  - Nokia
  - Arista
  - Exfo
  - Viavi
  - H+S Polatis
- Circuit Providers
  - R&E
    - ESnet
    - FRGP
    - Internet2
  - Commercial:
    - Lumen
    - Verizon
    - Zayo
H+P POLATIS: OPTICAL SWITCH

- First used in SCinet in 2019
- Allows users to remotely reroute optical signals to different fibers
  - Some models include Optical Power Monitoring (OPM)
- Game-changer when it comes to testing circuits
  - Users are able to remotely loop or move a circuit from a router to a test set for certification/troubleshooting and back without physically repatching the fiber
  - Saves an incredible amount of time and maintains fiber cleanliness
- For SC23 we are working on interfacing with the API to allow for potential automation and to reduce the chance of unintentional service impact
SCinet-wide initiative for SC23 ... but why?

• About 20% of the SCinet volunteers this year work for federal institutions. Federal mandate:
  • Ensure all new networked Federal information systems are IPv6-enabled at the time of deployment to ensure the IPv6 only requirement is met. It is the agency's strategic intent to phase out the use of IPv4 for all systems. FERC requires that all IPv4 systems be upgraded to IPv6 upon the next acquisition cycle.

• SCinet is a great place for testing large changes and interoperability

We focused on 2 main parts of the network for IPv6-only:

• Management
• Wireless
BUILDING BLOCKS

Supporting services for IPv6 only Wireless:
- NAT64
- DNS64
- SLAAC and/or DHCPv6
- DHCP option 108

Supporting services for IPv6 only management network:
- NTP
- Syslog
- Monitoring: SNMP, streaming telemetry
- Configuration backup
- NSO/automation tools/remote configuration tools
- ZTP

3/29/2024
DHCP OPTION 108

Using DHCPv4 to turn off IPv4 stack on the client for a specific interface

For networks that contain a mix of both IPv6-only-capable hosts and IPv4-requiring hosts and that utilize DHCPv4 for configuring the IPv4 network stack on hosts

Using DHCPv4 for signaling is that IPv4 will be disabled only if both the client and the server indicate IPv6-only capability

Caveat (1): not supported on all Client OS. e.g. does not work on Windows 10 or 11…. yet

Caveat (2): This is a transitional tool for moving to IPv6 only networks
ALL CLIENTS ARE NOT CREATED EQUAL
MULTICAST TRAFFIC OVER WIRELESS

Our main technical issue we ran into was multicast issues on wireless which specifically affected wireless performance and timely router advertisements (Why is it always multicast?)

- Client isolation
- Multicast filtering
- mDNS protocol traffic (really all broadcast/multicast discovery traffic including bonjour, LLMNR, Dropbox LAN sync, SSDP)
NOTABLE CLIENT ISSUES EXPOSED BY DHCP OPTION 108

• Misconfigured, centrally based host firewalls caused significant issues with proper IPv6 functionality (i.e. do not filter ICMP)
• Certain older and non-google (pixel) Android devices have non-trivial IPv6 limitations causing an inability or limit in connectivity to certain IPv6 networks
• Router Advertisements use on-link multicast by default, leveraging unicast router advertisements may alleviate some multicast related issues
Network researchers and professionals from government, education, research, and industry are invited to submit proposals for demonstrations and experiments at the SC Conference that display innovation in emerging network hardware, protocols, and advanced network-intensive scientific applications.

- Researchers request SCinet services to their booth
- Use for projects requiring high-throughput traffic or private IP space
- Often implemented with VLANs (802.1Q) and loop prevention mechanisms (e.g. spanning tree)
- Researchers collaborate requiring same traffic at multiple booths or between booths
NRE AT SC23

- 32 accepted experiments/demonstrations in areas including:
  - Data mobility and data transfer as a service for terabit network scales
  - Single stream 400Gbps server capabilities
  - International network peering at terabit scales
  - Global data movement examples
  - R&D efforts for the Large Hadron Collider (LHC)
  - Packet marking and flow labeling
  - Software Defined Exchange (SDX) Multi-Services for Petascale Science
  - Testbed integration (e.g., FABRIC-Chameleon)
  - Fully-Automated Network Configuration Management
  - Multi-site data streaming orchestration
  - International P4 Experimental Networks
  - End-to-End Network Services and Workflow Integration
  - Resilient Distributed Processing and Reconfigurable Networks
  - Distributed Experimental Pipelines over WAN for Online Data Analysis
  - 5G on the Showfloor
  - Quantum Networks
  - Exploring FDT, QUIC, BBRv2 and HTTP/3 protocols in High Latency WAN paths
  - Uncompressed 8K video processing across the WAN
  - Distributed Machine Learning over Heterogeneous Edge Computing Resources

- 150+ VLANs implemented across multiple networks
- Many NRE demos had some type of tie to international networks.
As the showfloor is coming to a close, the NRE team coordinates an event where all experiments run simultaneously to maximize the WAN bandwidth utilization.

Peak capacity of over 6 Tb/s was used during the Data Tsunami event at SC23.
INDIS AT SC23

- Innovating the Network for Data Intensive Science Workshop
  - Started in SC14 in New Orleans
- SC23 saw a half day workshop, and a half day demonstration session provided by the SCinet INDIS team
- Papers:
  - Enhancing perfSONAR Measurement Capabilities Using P4 Programmable Data Planes (University of South Carolina)
  - Experimental Study of TCP Throughput Profiles and Dynamics Over Dedicated Connections (Oak Ridge National Laboratory)
  - Elephants Sharing the Highway – Studying TCP Fairness in Large Transfers Over High Throughput Links
  - Imtiaz Mahmud (Lawrence Berkeley National Laboratory, University of Southern California, Renaissance Computing Institute, and Oak Ridge National Laboratory)
  - Evaluation of SCION for User-Driven Path Control (Politecnico di Torino, University of Amsterdam, and SIDN Labs)
  - Throughput Optimization with a NUMA-Aware Runtime System for Efficient Scientific Data Streaming (University at Buffalo & Argonne National Laboratory)
Distinguished speaker session from Ohio State University on “AI-EDGE: NG Networks meet Distributed Intelligence”

Lightening Talks:
- Testbed Evaluation of an Attestation-Capable, Programmable Software Switch (Illinois Institute of Technology)
- Real-Time Frequency Moment Estimation on FPGA: Applications in Anomaly Detection and Weibull Flow Length Parameterization (Chung-Yuan Christian University)
- Experimenting TCP Performance with Fabric (Lawrence Berkeley National Laboratory, University of Southern California, Renaissance Computing Institute, and Oak Ridge National Laboratory)
Demonstrations:

- TCP experiment on FABRIC (Lawrence Berkeley National Laboratory, University of Southern California, Renaissance Computing Institute, and Oak Ridge National Laboratory)
- DYNAMOS: Dynamically Adaptive Microservice-based OS - A Middleware for Data Exchange Systems on FABRIC, (UvA)
- FABRIC, ESnet, and NRP. ESnet SmartNIC based on U280 FPGA, then figured out how to also make this work on our U55C in NRP (IIT Chicago)
- Towards Accountable Network Bandwidth Utilization via SDN (UCSD)
- Testbed Evaluation of an Attestation-Capable, Programmable Software Switch: What is 'my' network equipment configured to do?, Nishanth Shyamkumar (Illinois Institute of Technology)
AGENDA

4 PHASES OF SCINET (ON SITE)

- Staging
- Setup
  - NOC Move
- Show
- Teardown
SCINET STAGING

- Receive, **inventory**, and unpack contributor hardware, racks, power, etc
- Rack, stack, and power
- Install hardware, test, and configure at remote points of presence in show city.
- Configure, patch, test, test, test.
SCINET SETUP WEEK

- Prep for move to SCinet NOC on Exhibit floor.
- Move and lift racks on to the stage. (Wednesday)
- Power, repatch, and continue testing and turnup.
- Researchers start setting up toward end of week
- Go live is Saturday (before show) at noon
  - Conference starts Sunday morning 8am
  - Exhibit floor opens Monday night during gala
SCINET NOC MOVE CHALLENGES AND ADAPTABILITY

- Staging area not always convenient to show floor
- Our most dangerous / intricate process. Takes nearly 2 days.
  - must be careful with our volunteers and contributors equipment
SCINET SHOW WEEK

- Managing, Monitoring, troubleshooting 2 networks for 5 days.
  - Monitoring and working with Digital Experience team to make sure our virtual attendees have a flawless experience (new in 21)
- Securing the network
  - Actively searching for threats internally and externally
- Help Desk for 1 on 1 customer support
  - Fielding tickets till very end of show
- NRE team works with each NRE participant to make sure their demonstrations are performant
- Adapting, changing, and adding as needed to keep up with capacity needs.
SCINET TEARDOWN

- Show Floor closes ~3pm Thursday
- NOC emptied out and all crates and boxes are moved into the space
- Show Floor Friday 8am
  - Factory reset equipment
  - Remove all patches
  - de-energize, remove from rack, inventory, pack up, ship.
- Commodity network must remain live till conference closes at Noon.
  - SC23 a small portion must remain live until 3pm for digital experience
- Friday 6pm - Wrap dinner!
AGENDA

WHAT’S TO COME FOR SC24!
SC24......ATLANTA, GA
Phil Roth
Oak Ridge National Laboratory
A LITTLE ABOUT GWCC

• Unique spaces

• Over 4m sq ft in exhibit and meeting space

• 3 Separate Exhibit Halls (1m Sq Feet)
  • SC24 will be in A Hall and B Hall

https://www.gwccca.org
VICTORIES, CHALLENGES, & INFO

- Fiber availability – in and out of the building
- Shortened Staging Period
- Large distributed facility
- Challenges for wireless – lots of area to cover, few copper connections to uplink to
SC24 INITIATIVES

● 1. Make Atlanta successful
  ● Wired and Wireless Connectivity
  ● WAN Connectivity
● 2. IPv6 continuation
● 3. SCinet Cluster Pilot
● 4. SCinet Education
  ● Make sure SCinet has value for the volunteers
  ● SCinet Theater Presentations, Communications to Organizations, Demonstrations & Talks
● 5. Diversity Initiatives (WINS, COMMUNITY)
AGENDA

- SC24 Preparation
- Conclusions
FINAL THOUGHTS

- 1 year to design, 1 month to build, 1 week to operate, 1 day to teardown
- 2 distinct networks built by volunteers
  - Production network
  - Research network
- 200+ Volunteers, from 100+ organizations across 18 teams working together to design, build, and operate the world’s fastest network
- Focus on education, diversity, and innovation
SCINET - THE WORLD'S FASTEST TEMPORARY NETWORK!
